

InControl earns Gartner's 2012 'Cool Vendor' in ITAM

InControl's IT Asset Intelligence and Asset Management Solution combines Hardware Discovery/Inventory of all IT Assets, Energy Management, Software Asset Management with People and Location in one solution.

April 30th, 2012

San Diego, California, USA – Press Release – InControl, a global solution in IT Asset Management is proud to have been selected as a Gartner "Cool Vendor in IT Asset Management" in the [report](#) published on April 12th, 2012.

"We are honored and proud to be recognized by Gartner for our approach to enterprise ITAM", said InControl's CEO Gary Paquette. "We have worked hard in designing and creating a solution that met the requirements of many enterprise and non-enterprise clients looking to have all of the IT Asset data, regardless of the OS or platform, in one centralized database. This includes our Energy Control solution that provides valuable insight into the energy, CO2 emissions and costs of energy."

As quoted in the report, "While there are many auto-discovery and inventory tool vendors supporting the multi dimensional need for inventory capabilities, ie security, anti-virus, network monitoring and ITAM, to perform their core function, there is only slight little differentiation among the point vendors that do inventory for ITAM purposes. Therefore, when a vendor adds functionality beyond the basic scan and correlation of file types, this is a novel approach to increasing the tool's value and making it more strategic in an organization."

With decades of experience, InControl's award winning solution uniquely delivers integrated DCIM, network discovery, inventory and asset management into a centralized integrated solution. InControl's technology design goals were to provide you with an efficient solution to reducing your overall cost of operations and keeping your valuable data fresh and as the conscience of the ITIL CMDB.

The ability to provide a central view to all of your IT Assets from Workstations, Servers (UNIX, Linux, Windows), Network Switches and Routers, controllers, VM Hosts and Guests to name a few from a multi-protocol and InControl's unique technology is a **must** in today's infrastructure and economy.
